SUBJECT INDEX

Acoustic wave (SAW) charge transfer imager, a surface, 145
Advanced design concepts for mosaic focal plane assembly, 113
Analysis, new methodology for infrared focal plane configuration, 75
Analysis of post focal plane processing using charge coupled devices (CCDs), performance, 206
Architectural considerations for a post focal plane programmable signal processor, 216
Architecture, hybrid extrinsic silicon focal plane, 9
Area image sensor, high resolution multispectral linear focal plane using an, 46
Arrays, operation of pyroelectric self-scanning infrared (IR) detector, 132
Arrays, submillisecond measurements of system optical modulation functions in mosaic focal plane, 185
Assembly, advanced design concepts for mosaic focal plane, 113
Assembly, Z-packaging technology for focal-plane, 103

Bismuth-doped silicon: an extrinsic detector for long-wave length infrared (LWIR) applications, 2

(CCD) camera, preliminary results from a single-photon imaging x-ray charge coupled device, 57
(CCD) interface methods, detector-charge coupled device, 81
(CCDs), performance analysis of post focal plane processing using charge coupled devices, 206
(CID) technology, review of charge injection device, 26
Cadmium telluride hybrid mosaic focal planes, mercury, 153
Camera, preliminary results from a single-photon imaging x-ray charge coupled device (CCD), 57
Charge coupled device (CCD) camera, preliminary results from a single-photon imaging x-ray, 57
Charge coupled device (CCD) interface methods, detector, 81
Charge coupled devices (CCDs), performance analysis of post focal plane processing using, 206
Charge-coupled device monolithic focal plane array (MFPA) readout, experimental investigation of noise sources in a, 140
Charge-coupled staring mosaic infrared imagers, dynamic range, uniformity, and sensitivity of, 97
Charge injection device (CID) technology, review of, 26
Charge transfer imager, a surface acoustic wave (SAW), 145
Concepts and systems requirements, staring, 182
Configuration analysis, new methodology for infrared focal plane, 75
Coupled device (CCD) interface methods, detector-charge, 81
Coupled devices (CCDs), performance analysis of post focal plane processing using charge, 206
Coupled solid state focal plane mosaic, fiber-optic, 126

Delay and integration (TDI), and pulse shaping, signal-to-noise ratio dependence on frame time, time, 167
Density large focal plane concepts, modular high, 68

Design concepts for mosaic focal plane assembly, advanced, 113
Detector arrays, operation of pyroelectric self-scanning infrared (IR), 132
Detector-charge coupled device (CCD) interface methods, 81
Detector for long-wave length infrared (LWIR) applications, Bismuth-doped silicon: an extrinsic, 2
Device (CCD) interface methods, detector charge coupled, 81
Device (CID) technology, review of charge injection, 26
Devices (CCDs), performance analysis of post focal plane processing using charge coupled, 206
Dynamic range, uniformity, and sensitivity of charge-coupled staring mosaic infrared imagers, 97

Elevated temperature focal planes, photovoltaic $Hg_{1-x}Cd_xTe$ technology for, 19
Experimental investigation of noise sources in a charge-coupled device monolithic focal plane array (MFPA) readout, 140
Extrinsic detector for long-wave length infrared (LWIR) applications, Bismuth-doped silicon: an, 2
Extrinsic silicon focal plane architecture, hybrid, 9

Fiber-optic coupled solid state focal plane mosaic, 126
Film HgCdTe for mosaic focal planes, thin-, 13
Filters, tunable spectral, 158
Focal plane architecture, hybrid extrinsic silicon, 9
Focal plane array (MFPA) readout, experimental investigation of noise sources in a charge-coupled device monolithic, 140
Focal plane assembly, advanced design concepts for mosaic, 113
Focal-plane assembly, Z-packaging technology for, 103
Focal plane concepts , modular high density large, 68
Focal plane configuration analysis, new methodology for infrared, 75
Focal plane mosaic, fiber-optic coupled solid state, 126
Focal plane processing, performance analysis of mosaic, 189
Focal plane processing for staring IR imagers, post, 198
Focal plane processing using charge coupled devices (CCDs), performance analysis of post, 206
Focal plane programmable signal processor, architectural considerations for a post, 216
Focal plane for star sensors, mosaic, 32
Focal plane using an area image sensor, high resolution multispectral linear, 46
Focal planes, mercury cadmium telluride hybrid mosaic, 153
Focal planes photovoltaic $Hg_{1-x}Cd_xTe$ technology for elevated temperature, 19
Focal planes, thin-film HgCdTe for mosaic, 13
Frame time, time delay and integration (TDI), and pulse shaping, signal-to-noise ratio dependence on, 167
Functions in mosaic focal plane arrays, submillisecond measurements of system optical modulation, 185

$Hg_{1-x}Cd_xTe$ technology for elevated temperature focal planes, photovoltaic, 19
HgCdTe for mosaic focal planes, thin-film, 13
High density large focal plane concepts, modular, 68
High resolution multispectral linear focal plane using an area image sensor, 46
Hybrid extrinsic silicon focal plane architecture, 9
Hybrid mosaic focal planes, mercury cadmium telluride, 153

(IR) detector arrays, operation of pyroelectric self-scanning infrared, 132
IR imagers, post focal plane processing for staring, 198
Image sensor, high resolution multispectral linear focal plane using an area, 46
Imager, a surface acoustic wave (SAW) charge transfer, 145
Imagers, dynamic range, uniformity, and sensitivity of charge-coupled staring mosaic infrared, 97
Imagers, post focal plane processing for staring IR, 198
Imaging x-ray charge coupled device (CCD) camera, preliminary results from a single-photon, 57
Infrared (IR) detector arrays, operation of pyroelectric self-scanning, 132
Infrared (LWIR) applications, Bismuth-doped silicon: an extrinsic detector for long-wave length, 2
Infrared focal plane configuration analysis, new methodology for, 75
Infrared imagers, dynamic range, uniformity, and sensitivity of charge-coupled staring mosaic, 97
Injection device, (CID) technology review of charge, 26
Integration (TDI), and pulse shaping, signal-to-noise ratio dependence on frame time, time delay and, 167
Interface methods, detector-charge coupled device (CCD), 81

(LWIR) applications, Bismuth-doped silicon: an extrinsic detector for long-wave length infrared, 2
Large focal plane concepts, modular high density, 68
Linear focal plane using an area image sensor, high resolution multispectral, 46
Long-wave-length infrared (LWIR) applications, Bismuth-doped silicon: an extrinsic detector for, 2

(MFPA) readout, experimental investigation of noise sources in a charge-coupled device monolithic focal plane array, 140
Measurements of system optical modulation functions in mosaic focal plane arrays, submillisecond, 185
Mercury cadmium telluride hybrid mosaic focal planes, 153
Methods, detector-charge coupled device (CCD) interface, 81
Modular high density large focal plane concepts, 68
Modulation functions in mosaic focal plane arrays, submillisecond measurements of system optical, 185
Monolithic focal plane array (MFPA) readout, experimental investigation of noise sources in a charge-coupled device, 140
Mosaic, fiber-optic coupled solid state focal plane, 126
Mosaic focal plane arrays, submillisecond measurements of system optical modulation functions in, 185
Mosaic focal plane assembly, advanced design concepts for, 113
Mosaic focal plane processing, performance analysis of, 189
Mosaic focal plane for star sensors, 32
Mosaic focal planes, mercury cadmium telluride hybrid, 153
Mosaic focal planes, thin-film HgCdTe for, 13
Mosaic infrared imagers, dynamic range, uniformity, and sensitivity of charge-coupled staring, 97
Multispectral linear focal plane using an area image sensor, high resolution, 46

New methodology for infrared focal plane configuration analysis, 75
Noise ratio dependence on frame time, time delay and integration (TDI), and pulse shaping, signal-to-, 167
Noise sources in a charge-coupled device monolithic focal plane array (MFPA) readout, experimental investigation of, 140

Operation of pyroelectric self-scanning infrared (IR) detector arrays, 132
Optic coupled solid state focal plane mosaic, fiber-, 126
Optical modulation functions in mosaic focal plane arrays, submillisecond measurements of system, 185

Packaging technology for focal-plane assembly, Z-, 103
Performance analysis of mosaic focal plane processing, 189
Performance analysis of post focal plane processing using charge coupled devices (CCDs), 206
Performance analysis, statistical reasoning and technique in sensor system, 221
Photon imaging x-ray charge coupled device (CCD) camera, preliminary results from a single-, 57
Photovoltaic $Hg_{1-x}Cd_xTe$ technology for elevated temperature focal planes, 19
Plane architecture, hybrid extrinsic silicon focal, 9
Plane arrays, submillisecond measurements of system optical modulation functions in mosaic focal, 185
Plane assembly, advanced design concepts for mosaic focal, 113
Plane assembly, Z-packaging technology for focal-, 103
Plane concepts, modular high density large focal, 68
Plane configuration analysis, new methodology for infrared focal, 75
Plane mosaic, fiber-optic coupled solid state focal, 126
Plane processing, performance analysis of mosaic focal, 189
Plane processing for staring IR imagers, post focal, 198
Plane processing using charge coupled devices (CCDs), performance analysis of post focal, 206
Plane programmable signal processor, architectural considerations for a post focal, 216
Plane for star sensors, mosaic focal, 32
Plane using an area image sensor, high resolution multispectral linear focal, 46
Planes, mercury cadmium telluride hybrid mosaic focal, 153
Planes, thin-film HgCdTe for mosaic focal, 13
Post focal plane processing for staring IR imagers, 198
Post focal plane processing using charge coupled devices (CCDs), performance analysis of, 206
Post focal plane programmable signal processor, architectural considerations for a, 216
Preliminary results from a single-photon imaging x-ray charge coupled device (CCD) camera, 57
Processing, performance analysis of mosaic focal plane, 189
Processing for staring IR imagers, post focal plane, 198
Processing using charge coupled devices (CCDs), performance analysis of post focal plane, 206
Processor, architectural considerations of a post focal plane programmable signal, 216
Programmable signal processor, architectural considerations for a post focal plane, 216
Pyroelectric self-scanning infrared (IR) detector arrays, operation of, 132

Range, uniformity, and sensitivity of charge-coupled staring mosaic infrared imagers, dynamic, 97
Ratio dependence on frame time, time delay and integration (TDI), and pulse shaping, signal-to-noise, 167
Readout, experimental investigation of noise sources in a charge-coupled device monolithic focal plane array (MFPA), 140
Reasoning and technique in sensor system performance analysis, statistical, 221
Requirements, staring concepts and systems, 182
Resolution multispectral linear focal plane using an area image sensor, high, 46
Review of charge injection device (CID) technology, 26

(SAW) charge transfer imager, a surface acoustic wave, 145
Scanning infrared (IR) detector arrays, operation of pyroelectric self-, 132
Self-scanning infrared (IR) detector arrays, operation of pyroelectric, 132
Sensitivity of charge-coupled staring mosaic infrared imagers, dynamic range, uniformity, and, 97
Sensor, high resolution multispectral linear focal plane using an area image, 46
Sensor system performance analysis, statistical reasoning and technique in, 221
Sensors, mosaic focal plane for star, 32
Signal-to-noise ratio dependence on frame time, time delay and integration (TDI), and pulse shaping, 167
Signal processor, architectural considerations for a post focal plane programmable, 216
Silicon: an extrinsic detector for long-wave length infrared (LWIR) applications, Bismuth-doped, 2
Silicon focal plane architecture, hybrid extrinsic, 9
Single-photon imaging x-ray charge coupled device (CCD) camera, preliminary results from a , 57
Solid state focal plane mosaic, fiber-optic coupled, 126
Spectral filters, tunable, 158
Star sensors, mosaic focal plane for, 32
Staring concepts and systems requirements, 182
Staring IR imagers, post focal plane processing for, 198
Staring mosaic infrared imagers, dynamic range, uniformity, and sensitivity of charge-coupled, 97
Statistical reasoning and technique in sensor system performance analysis, 221
Submillisecond measurements of system optical modulation functions in mosaic focal plane arrays, 185
Surface acoustic wave (SAW) charge transfer imager, a, 145
System optical modulation functions in mosaic focal plane arrays, submillisecond measurements of, 185
System performance analysis, statistical reasoning and technique in sensor, 221
Systems requirements, staring concepts and, 182

(TDI), and pulse shaping, signal-to-noise ratio dependence on frame time, time delay and integration, 167
Technique in sensor system performance analysis, statistical reasoning and, 221
Technology for focal-plane assembly, Z-packaging, 103
Telluride hybrid mosaic focal planes, mercury, cadmium, 153
Temperature focal planes, photovoltaic $Hg_{1-x}Cd_xTe$ technology for elevated, 19
Thin-film HgCdTe for mosaic focal planes, 13
Time delay and integration (TDI), and pulse shaping, signal-to-noise ratio dependence on frame time, 167
Transfer imager, a surface acoustic wave (SAW) charge, 145
Tunable spectral filters, 158

Uniformity, and sensitivity of charge-coupled staring mosaic infrared imagers, dynamic range, 97

Wave (SAW) charge transfer imager, a surface acoustic, 145

X-ray charge coupled device (CCD) camera, preliminary results from a single-photon imaging, 57

Z-packaging technology for focal-plane assembly, 103
